Coverage and verification appendix

Every original required source is shown. All source authenticity, current policy, snapshot, enumeration and semantic completion remain unqualified unless separately accepted. Missing or unrequested material is not empty; no negative claim is supported.

Missing source/read query_tasks: UNAVAILABLE

Missing source/read query_action_items: UNAVAILABLE

Limitation: Exact excerpts are bound to supplied gateway records; semantic promise, owner, date and tracking links require verification.

Limitation: No qualified delivery/acceptance adapter was supplied. This projection never upgrades native task completion to delivered work.

Limitation: Current authorization and authenticity are gateway/control duties; hashes alone do not establish either.
