Commitment ledger

Promise, suggestion, owner, due date, tracking link and delivery meanings are extracted unverified observations. A native completed flag, URL or quoted passage alone never establishes delivery or acceptance.

promise, same-original-conflicting-owner | conflicting-evidence

Original promise excerpt: I will send the revised briefing on Friday. This is a quoted source statement, not verified delivery.

Owner conflicting: Ana / Bo

Due date conflicting: 2026-10-20 / 2026-10-21

Completed: false. Tracking 0; delivery claims 1. Proposed tracking links remain unverified.

Follow-up suggestion: Resolve conflicting owner/date evidence.

Bound-source-excerpt: I will send the revised briefing on Friday. This is a quoted source statement, not verified delivery.

Suggestions and unresolved observations

Native tracking appendix

These are authorized structured source rows, separate from extracted promise observations. Native status, owner and date remain source assertions. Native completion never verifies delivery or acceptance. No promise link is inferred from title, URL, owner, date or recommendation text.

tasks / 71000000-0000-4000-8000-000000000091 | native_task

Native title "Native tracked briefing"; status "done" [unverified].

Native owner "Native owner Chen"; native-task-dueDate "2026-10-25T00:00:00.000Z"; created "2026-10-01T00:00:00.000Z"; updated "2026-10-01T00:00:00.000Z". These values do not resolve conflicting extracted owner/date observations.

Declared authority authoritative; source version "2026-10-01T00:00:00.000Z" | native-source-assertion-unverified.

Native completion {"completed":true,"evidence":"native_task_status","establishesDeliveryOrAcceptance":false, "note":"Native workflow status does not verify delivery or client acceptance."}; deliveryVerified: false; acceptanceVerified: false.

Original source proof {"version":1,"owner":"engagement_tasks","sourceRecordId":"71000000-0000-4000-8000-000000000091","currentClientId":"99999999-9999-4999-8999-999999999999","sourceVersion":"2026-10-01T00:00:00.000Z","contentSha256":"7e2fab573f7326c6bdc8e0b87ace9d8717faccd495168eb31be114f1c6d1866f","linkedSources":[]}. A native content digest is not a full-body excerpt hash or verified source authenticity.

Limitation: Exact excerpts are bound to supplied gateway records; semantic promise, owner, date and tracking links require verification.

Limitation: No qualified delivery/acceptance adapter was supplied. This projection never upgrades native task completion to delivered work.

Limitation: Current authorization and authenticity are gateway/control duties; hashes alone do not establish either.

Original skill and immutable revision provenance
